

# Heat-On Heating Systems

Far Infrared Radiant Heating  
Technology

“no plumbing, no ductwork, no maintenance”

This featured home showcases how a Heat-On heating system can be not only energy efficient and functional, it can also be incredibly stylish.

The owners of this property were after a healthy heating solution with energy efficient features. They paid approximately half the same amount as they would have for a hydronic heating system.

This was achieved with a complete Heat-On system; heating the entire home with our unique patented far infrared heating panels.

The gentle rays produced from our panels are able to comfortably heat rooms while consuming acceptable amounts of electricity, and creating no dust, minimal noise and no vibrations.

Open plan living and kitchen, 50m<sup>2</sup>  
5 x 735 watt heat-on panels

4

Colour matched to ceiling: Hogs bristle half

Heat-On panels blend in stylishly with the homes decor

Master bedroom: 2 x 735 watt panels, 20m<sup>2</sup>
